

User Guide for Creating and Using the Olympic Games Database in MySQL

The first part of the the guide is to unzip the ISYS_Assignment_21341382.zip file in Linux environment and open the folder.

After unzipping the file, you have to right click on the same folder and click open terminal.

The terminal will look like this.

```
STUDENT\21341382@v-2204-hcs-097:/mnt/home/21341382/ISYS_Assignment_21341382$
```

After that you have to type this in the terminal to turn on MySQL connection to python3 to run this database

```
pip install mysql-connector-python
```

After the installation is finished type

```
Python main.py
```

In the terminal. As all execution functions are already defined on startup of this python file, all database and insertion of data will be automatically done.

```
STUDENT\21341382@v-2204-hcs-097:/mnt/home/21341382/ISYS_Assignment_21341382$ python main.py
Database connection successful.
Data inserted into Country from country.csv
Data inserted into Athlete from athletes.csv
Data inserted into Event from events.csv
Data inserted into Medal from medals.csv
Data inserted into Venues from venues.csv
Data inserted into Athletics from Athletics.csv
```

The Menu will look this. You can use any options to get your required answer. Press 16 to exit the program.

```
